

You

In javascript using AJAX, I'm getting a return request.readyState value of '1' instead of '4'. What does the '1' value mean?

Copilot

In JavaScript, when using AJAX, the `readyState` property of the `XMLHttpRequest` object indicates the current state of the request. A `readyState` value of 1 means that the request has been **opened** but not yet sent. This state is known as the **OPENED** state.

Here's a quick overview of the `readyState` values:

1. **0 (UNSENT)**: The request has not been opened yet.
2. **1 (OPENED)**: The request has been opened.
3. **2 (HEADERS_RECEIVED)**: The request has been sent, and the headers and status are available.
4. **3 (LOADING)**: The request is in progress, and the response is being received.
5. **4 (DONE)**: The request is complete, and the response is fully received.

If your request is stuck at `readyState` 1, it means the `open()` method has been called, but the `send()` method hasn't been invoked yet.

Would you like some help troubleshooting why your request might not be progressing beyond this state?
